

Electro-Balance Sales Soar **Over 350%!**

Here's What You Need to Know:

Last year the sales of our Electro-Balance™ Remotely Controlled Battery-Powered Airflow Balancing Dampers soared on the west coast. Popularity is now spreading across the country, with an over 350% increase in Q1 and Q2 sales over last year.

What Makes Battery-Powered So Popular?

Top Sales Points:

Electro-Balance battery-powered dampers offer remote operation, like the manually-operated model, but provide many additional benefits:

- No Hard Wiring is required – snap fit connectors.
- Motor has been tested for a 100k cycles – power is in the hand-held remote control via a 9 volt battery.
- Wiring can be routed in a central location to house up to 8 units into 1 termination port
- Cost savings for runs greater than 8ft.

“We have been working hard to communicate the benefits of our Electro-Balance product line and we are really starting to reap the rewards. We see no reason why this sharp increase in sales can't take place everywhere.”

- Elaine Malliaras, MAT Sales Manager

Electro-Balance appeals to Architects, Engineers, Contractors, Balancing Technicians, and Building Managers.
