Your Possibilties are Endless
with Our Innovative Airflow Management Products

For over 20 years our team of professionals have engineered unique solutions to control the movement of air in commercial, residential and manufacturing structures.

From our patented remotely-operated airflow balancing dampers to our blast, smoke and fire dampers, our products can be found in some of the most prestigious buildings around the world.

Our engineering, manufacturing and assembly services have been applauded by architects, engineers, developers, installers and building managers alike.

We are relentless problem-solvers, and proud of our reputation for break-through product design and development, manufacturing and distribution.

We can do the same for you.
